Pebble solitaire is an interesting game. This is a game where you are given a board with an arrangement of small cavities, initially all but one occupied by a pebble each. The aim of the game is to remove as many pebbles as possible from the board. Pebbles disappear from the board as a result of a move. A move is possible if there is a straight line of three adjacent cavities, let us call them A, B, and C, with B in the middle, where A is vacant, but B and C each contain a pebble. The move constitutes of moving the pebble from C to A , and removing the pebble in B from the board. You may continue to make moves until no more moves are possible.

In this problem, we look at a simple variant of this game, namely a board with twelve cavities located along a line. In the beginning of each game, some of the cavities are occupied by pebbles. Your mission is to find a sequence of moves such that as few pebbles as possible are left on the board.
a)

b)

c)

Fig 1. In a) there are two possible moves, namely $8 \rightarrow 6$, or $7 \rightarrow 9$. In b) the result of the $8 \rightarrow 6$ move is depictel, and again there are two possible moves, $5 \rightarrow 7$, or $6 \rightarrow 4$. Making the first of these results in c), from which there are no further moves.

## Input

The input begins with a positive integer $n$ on a line of its own. Thereafter $n$ different games follow. Each game consists of one line of input with exactly twelve characters, describing the twelve cavities of the board in order. Each character is either '-' or 'o' (The fifteenth character of English alphabet in lowercase). A '-' (minus) character denotes an empty cavity, whereas a 'o' character denotes a cavity with a pebble in it. As you will find in the sample that there may be inputs where no moves is possible.

## Output

For each of the $n$ games in the input, output the minimum number of pebbles left on the board possible to obtain as a result of moves, on a row of its own.

## Sample Input

5
---oo-------
-o--o-oo----
-o-----000---
000000000000
0000000000-०

## Sample Output
